Visitor Management System — Administrator SOP

A quick, visual guide. Each red number on a screenshot matches a numbered step below it.

Version 2.2 · 2026-06-11 · Pansen Engineering India Pvt. Ltd.

Field	Value
Document	VMS Administrator SOP
Version	2.2 (supersedes all earlier copies)
Date	2026-06-11
Owner	IT / Operations
Audience	VMS administrators, site managers, security
Standards	ISO/IEC 82079-1 · ISO/IEC 27001 access control · India DPDP Act 2023
Site	pansen.vmsys.co

How to read this guide

Every task follows the **same three-part pattern**, so you always know where to look:

Part	What it is
① ② ③ on the picture	Red circles on the screenshot mark exactly where to click
The step table	The same ① ② ③ numbers, telling you what each one does
The blue note	One tip or warning worth knowing

Golden rule. Red circle ① on the picture = step ① in the table. Always match the numbers.

The visitor journey at a glance

The pass lifecycle — five states, in order:

State	Meaning	Enter?
Issued	Registered; QR is live (happens automatically)	✓
Checked In	Scanned in at the gate	inside
Checked Out	Scanned out (or auto-closed at day end)	next day (Worker)
Expired	Past its valid-until date	✗

Cancelled	Withdrawn by an admin	✗
-----------	-----------------------	---

1 • Sign in

Goal: get into the admin back office.

Step	Do this
①	Type your email
②	Type your password
③	Forgot it? Click Forgot Password
④	Click Login

Note. One login per person — never share accounts. Every action is traced to you.

2 • The dashboard

Goal: know where everything lives.

Step	Section	Use it for
①	Team Management	Add / remove staff
②	Pass Management	Create & find passes — daily
③	Scanner & Registration	Gate scanner + sign-up link — daily
④	Compliance (NCR)	Quality forms (if used)
⑤	Reports & Analytics	Stats & exports

Check this first each morning: the *On Site* number at the top — it shows who is inside right now.

3 • Find a pass

Goal: locate any pass quickly.

Step	Do this
①	+ Add Site Pass — create one by hand (Section 4)
②	Batch Approve — legacy, rarely needed
③	Left filters — Assigned To, Created By, Tags
④	Top search — ID, Type, Name, Status, Site

Tip. Click any row to open the pass. Click **View Report** (top right) for charts.

4 • Create a pass manually

Goal: make a pass for someone who can't self-register.

The screenshot shows the 'New Site Pass' form in the VMS system. The form is divided into three main sections: Basic Information, Visit Information, and Schedule & Location. Red circles with numbers 1 through 5 highlight key fields: 1. Pass Type (Visitor), 2. Full Name, 3. Mobile, 4. Email, and 5. Save button (top right).

Step	Do this
①	Pass Type — Visitor / Worker / Vendor
②	Full Name — as printed on the ID
③	Mobile — with country code (+91...)
④	Email — for QR delivery
⑤	Save (top right)

Important. A **photo is required** — the pass will not save without one. Dates must be today → 90 days ahead.

5 • Edit, extend or cancel

Goal: fix or change a pass after it is issued.

If...	Do this
Wrong email	Fix Email → Save → Resend QR
Wrong dates	Change Valid From / Until → Save (QR still works)
Wrong host	Change Host Name → Save
Extend a worker	Change Valid Until (≤ 90 days) → Save

Visit cancelled

Click **Cancel** at the top

Note. The **mobile number can't be changed** after issue — cancel and create a new pass instead.

6 • Visitor self-registration

Goal: let visitors register themselves before they arrive.

Share **pansen.vmsys.co/register** — print it as a gate poster, email it, or send by WhatsApp.

 **VMS Registration**

Already registered? Find your pass

+91 Enter **1** e number

Find

OR REGISTER NEW

 **2**
Meeting / Business

 **Worker**
Contractor / Labor

Photo * (Required)
3 a Upload

Full Name *

Mobile Number *

+91 10-digit mobile **4**

Email

Company / Organization *

Person to Visit *

Visit Date *

2026/06/06 

Purpose of Visit

ID Type

Select ID type 

ID Number

Site Location

Select Site Location * 

Please select your site manually

Step	The visitor does this on their phone
①	Returning? Type mobile + Find to reuse a past pass
②	Pick Visitor or Worker
③	Add a photo — required (Camera or Upload)
④	Type mobile — tap OTP — enter the SMS code
⑤	Fill the form — tap Register & Get Pass

Important. No photo = no pass. The pass is **issued instantly** after they submit — no approval step, no admin action. It appears in your list as **Issued**.

Verify with Aadhaar + face check (recommended)

Goal: confirm the visitor's identity from their Aadhaar — offline — and confirm the person registering is the cardholder.

The screenshot shows a mobile app interface for Aadhaar verification and face check. It includes a green box for step 1 (Aadhaar verification), a green box for step 2 (Face check), and a green box for the final match result. The interface also shows a 'Verified Demo Visitor' card and a 'Photo * (Required)' section with a camera icon and an 'Upload' button.

1 Verify Aadhaar
Take a photo of the QR on your Aadhaar card (or upload one) — auto-fills your verified name

2 Verified offline against UIDAI's database. We only read your name & photo — your Aadhaar number is never stored.

✓ Identity verified. Now take YOUR photo for the gate.

Verified Demo Visitor
Aadhaar xxxx0000 · UIDAI signed

2 Face check — confirm it's you
We compare the photo on the Aadhaar with the visitor's selfie — entirely on the phone. No face data is uploaded or stored.

Retake card photo

Reference face ready ✓

✓ Same person — strong match (89%)
Verified on the phone against the Aadhaar photo. Above 60% is a confident match.

Photo * (Required)

3 Camera

Upload

Step	On the registration screen
------	----------------------------

①	Verify with Aadhaar — tap to start
②	Privacy note — verified offline against UIDAI; the Aadhaar number is never stored
③	Photo (Required) — the visitor's live selfie for the gate

What happens, in order:

1. **Verify the card.** Tap **Verify with Aadhaar** → **take a photo of the Secure QR** (back of the card), or tap **Upload** and pick a clear close-up. On success a green **✓ Verified** card shows the name and last 4 digits, and the **Full Name is filled and locked**.
2. **Face check.** A **Face check** panel then appears. Tap **Photograph the FRONT of the Aadhaar** (the photo side) → *Reference face ready ✓*. Then tap **Camera** below and take the visitor's **live selfie** (front camera).
3. **Result.** It shows instantly: **✓ Same person (xx%)** in green, or **✗ Faces don't match** in red.

Reading the score. Two photos of the same person are rarely 100%. The threshold is **60%** — anything **above 60% is a confident match**. A no-match is **advisory** (the visitor can retake the selfie; the guard verifies in person at the gate), not a hard block. The entire face check runs **on the phone** — no face data is uploaded or stored.

What it does	Detail
Verification	QR checked against UIDAI's digital signature , fully offline
Auto-fill	Fills and locks the verified name from the card
Face match	Confirms the live selfie is the cardholder — on-device, score shown
Privacy	Only the name is read; the Aadhaar number and face data are never stored
Forgery	A fake or altered QR is rejected ("failed UIDAI verification")

Turning it on as mandatory. By default Aadhaar verification is optional. To require it (no pass without a verified Aadhaar), your administrator enables it per site. Confirm scanning works on your gate devices first, so genuine visitors are never blocked.

7 • The gate scanner

Goal: check people in and out securely.

Step	Element
------	---------

①	ON SITE live count (V = Visitors, W = Workers)
②	GPS status (green = located)
③	Check In (green) — scan an arrival
④	Check Out (orange) — scan a departure
⑤	Manual Entry — type a Pass ID if no camera

Every scan shows the full profile — the guard sees exactly who they admit:

On screen	Photo • Name • Worker/Visitor badge • Company • Mobile • ID number • Validity • Work/Purpose • Vehicle • ID Verified / Not Verified
-----------	---

Scanner colours:

 Green	 Yellow	 Red
Welcome / Goodbye — let through	Already checked in — check if re-entering	Expired / invalid — refuse , send to reception

Security. Only the in-app scanner checks people in/out — it needs a guard login, records GPS, and logs who scanned. A plain phone camera or **Google Lens cannot check anyone in**; use the scanner.

8 • Auto-checkout (runs by itself)

Goal: understand why the on-site count stays honest.

Guards scan people **in** but often forget to scan them **out**. So each day the system **automatically checks out** anyone left in from a previous day.

What it does	Detail
When	Once a day, automatically
Who	Anyone still “Checked In” from a prior day
Exit time	End of the day they entered (not now)
Tag	Marked <i>Auto-checkout (no exit scan)</i> in reports
Today’s arrivals	Left alone — closed tonight

Why it matters. Your **On Site** number is trustworthy for a fire drill, and multi-day workers aren’t blocked the next morning. You don’t operate this — it just runs.

9 • Manage your team

Goal: give the right people the right access.

Step	Do this
①	Member counters (Total / Active / Pending)
②	+ Add Member — invite a colleague
③	Batch Import — many users from CSV
④	Search a member
⑤	Pencil — edit or disable

The roles (give the least powerful one that does the job):

Role	Can do
VMS Admin	Everything
VMS Site Manager	Create/edit passes, reports
VMS Security	Use the scanner
VMS Auditor	Read-only auditor scanner
VMS Viewer	Dashboards & reports only

Note. To remove someone, set their status to **Inactive** (you can't delete — the audit trail must stay). "Same access as X" means copying their **role + site access + membership**, not just the role.

10 • Reports

Goal: answer "who, when, how long" in seconds.

Step	Element
①	Total Passes
②	Pending / On Site
③	On Site
④	Actions — export Excel / PDF, refresh

Tip. Set a date range, then **Export** → **Excel** for spreadsheets or **PDF** for management.

11 • The audit log

Goal: see who did what, and when.

Step	Do this
①	Open VMS Audit Log from the dashboard
②	Filter by date and user
③	Click any entry for full detail

Note. Every registration, edit, sign-in and role change is recorded here.

A • Tips

Tip	Why
One login each	Keeps the audit trail clean and secure
Least privilege	Not everyone needs Admin
Photo is required	No pass is issued without one — tell visitors to allow the camera
Use the in-app scanner	Google Lens / phone camera cannot check people in
Trust the On-Site count	It self-corrects nightly (Section 8)
Push self-registration	No gate queue; the pass issues itself
Laminate Section 7	Keep the scanner card at the gate for guards
Push Aadhaar verify	Auto-fills the verified name and face-matches

the selfie to the card — proves identity, faster than a typed name

B • Troubleshooting

Symptom	Fix
Visitor didn't get the OTP	Check the number + country code; wait 60 s, Resend. Limit 3 / 10 min. Low signal → try another number, or create the pass manually.
"A photo is required"	Working as intended — add a photo (camera or upload).
QR won't scan	Raise screen brightness; wipe the lens. "Expired" → register again. Name ≠ person → refuse.
Google Lens shows only text	Expected — use the in-app scanner to check in/out.
Forgot password	Forgot Password on sign-in. Link valid 20 min ; weak passwords are rejected; if Update does nothing, the link expired — request a new one.
User can't sign in	"Invalid" → reset. "Disabled" → reactivate. "Too many attempts" → wait 15 min.
New person sees no data	Role copied but site access wasn't — ask IT to mirror an existing admin fully.
On-Site looks high mid-day	Normal — self-corrects overnight (Section 8).
QR photo won't verify	The Secure QR is dense — retake so the QR is sharp, well-lit and fills the frame , or use Upload with a clear close-up.
"Failed UIDAI verification"	The QR isn't a genuine/intact Aadhaar Secure QR — use the original card, eAadhaar PDF, or mAadhaar.
Face check says "no match"	Retake the selfie facing the camera in good light ; make sure the card-front photo clearly shows the face. A no-match does not block the pass — the guard verifies in person.
Face check can't find a face	Hold the phone steady, fill the frame with the face, avoid backlight/glare; then retake.
