

Pansen Engineering × VMS

Responses to Your Meeting Questions — Resolved Items

A focused, picture-led guide to the points raised in our review call. Each red number on a screenshot matches a numbered step below it.

Version 1.4 · 2026-06-19 · Pansen Engineering India Pvt. Ltd.

Field	Value
Document	VMS — Meeting Follow-up (Resolved Items)
Version	1.4
Date	2026-06-19
Prepared for	Pansen — Masu (HR), Vidhya (IT), Kavi (Site)
Covers	Aadhaar verification · OTP delivery · exceptions · records & data privacy
Site	pansen.vmsys.co

Summary — your points

#	What you raised	Status
1	A pass was issued even when Aadhaar was <i>not</i> verified	✅ Fixed — verification is now mandatory
2	The Aadhaar would not verify on the phone	✅ Clarified — scan the BACK QR
3	The SMS OTP does not arrive at the gate	✅ Email OTP added as a backup
4	Foreign / Nepal workers have no Aadhaar	✅ Admin creates the pass manually
5	Download records with verification details	✅ Export now shows verification (ID masked)
6	Store the Aadhaar card in the system	⚠️ Cannot store the full Aadhaar (law) — see what we keep instead
7	Can one mobile number be used by many people?	✅ Clarified — one number = one person
8	Check-in / check-out must be reliable	✅ Fixed — nightly auto check-out enabled
9	Work-hours attendance (time in / out) report	✅ Done — live now
10	Who issued / approved each pass	✅ Done — recorded & exportable
—	Gate-crowd fast flow · contractor batch sign-up	🔧 Next phase

*This document covers the items that are **resolved or clarified**. The items marked 🛠️ are tracked and will follow with their own steps.*

1 • Aadhaar verification is now mandatory

Goal: no pass without a verified identity.

Earlier a pass could be issued even if the Aadhaar was not verified — because the “mandatory” setting was **off**. It is now **ON** for Pansen.

What it means	Detail
Self-registration	A visitor/worker cannot get a pass unless their Aadhaar Secure QR is verified
A fake / unverified ID	Is rejected — no pass
Exceptions	Foreigners / no-Aadhaar — admin creates the pass (Section 4)

How to confirm it's working: register on a phone **without** verifying Aadhaar — it should now stop you. With a verified Aadhaar, it issues the pass as normal.

2 • Scanning the Aadhaar — use the BACK

Goal: get the QR to read first time.

1 Verify Aadhaar
Take a photo of the QR on your Aadhaar card (or upload one) — auto-fills your verified name

2 Verified offline against UIDAI's database. We only read your name & photo — your Aadhaar number is never stored.

✓ Identity verified. Now take YOUR photo for the gate.

Verified Demo Visitor
Aadhaar xxxx0000 · UIDAI signed

2 Face check — confirm it's you
We compare the photo on the Aadhaar with the visitor's selfie — entirely on the phone. No face data is uploaded or stored.

Retake card photo

Reference face ready ✓

✓ Same person — strong match (89%)
Verified on the phone against the Aadhaar photo. Above 60% is a confident match.

Photo * (Required)

3 Upload

Step	Do this
①	Tap Verify with Aadhaar , then photograph the BACK of the card (the big square QR)
②	It is checked offline against UIDAI — the Aadhaar number is never stored
③	After it verifies, add the visitor's photo (Camera / Upload)

The **front has no QR** — that is why scanning the front failed in our call. Keep the QR sharp, straight and well-lit. The **mAadhaar app** and **eAadhaar PDF** also work. Kaviyarasu's card was tested and verifies correctly.

3 • If the SMS OTP doesn't arrive → Email OTP

Goal: never let a visitor get stuck waiting for an SMS.

Mark	What it is
①	Mobile number + OTP — sends the SMS code
②	Enter the 6-digit code in these boxes
③	Verify OTP
④	“Didn't get the SMS? Email me the code” — the email backup
⑤	Email field — where the emailed code is sent

If the SMS doesn't arrive: make sure ⑤ **Email** is filled, tap ④, then type the emailed code in ② and tap ③ **Verify**. (Tell the visitor to check the spam folder.)

For a queue of workers: pre-register (send the link a day before) or have an admin create passes from the back office. A no-OTP supervisor flow is in the next phase.

4 • Foreign / no-Aadhaar workers

Goal: still admit people who can't verify Aadhaar (e.g. Nepal workers).

Open **Pass Management** → + **Add Site Pass** on the computer.

VMS > Site Pass > New Site Pass

Search or type a command (⌘ + G) English Help PA

New Site Pass Not Saved

Basic Information

Pass Type * **1** Visitor ID / Passport

Select Visitor for **2** Visitor, Worker for contractors Government ID or Passport number for verification

Full Name * **2** Enter the full name as shown on ID Vehicle Number **4**

Mobile * **3** Enter if the person is bringing a vehicle Email

Contact number with country code (e.g., +91) For sending the QR pass automatically

Visit Information

Company / Organization * Host Name *

The company or organization the person represents Name of the person being visited

Purpose of Visit * Host (System User)

Optional: Link to system user

Brief reason for the visit

Schedule & Location

Site / Zone Valid From * 12-01-2026

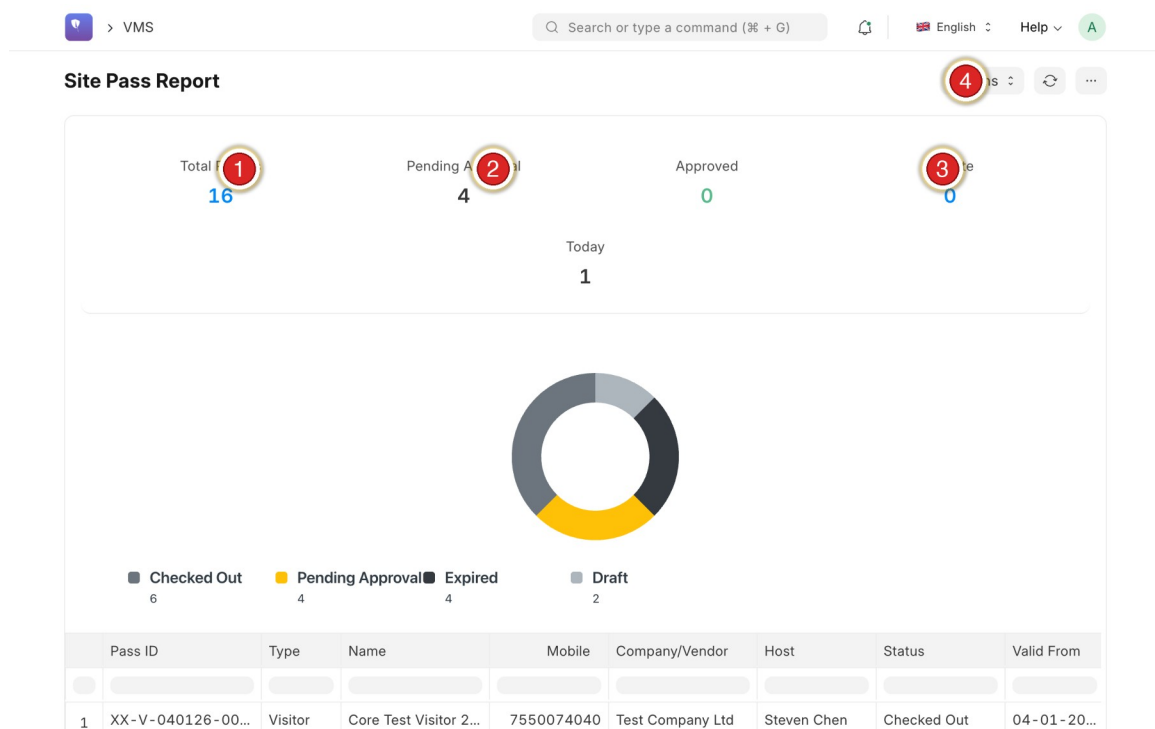

When the pass becomes active

Step	Do this
①	Pass Type — Visitor / Worker
②	Full Name — as printed on the ID
③	Mobile — with country code (+91...)
④	Email — for QR delivery
⑤	Save (top right) — the QR is emailed to them

Admin-created passes are **exempt** from the Aadhaar requirement, so genuine foreign workers are never blocked.

5 • Records & export (with verification)

Goal: pull a list of who came, when, and whether their ID was verified.

Mark	Element
①	Total Passes
②	Pending / On Site
③	On Site
④	Actions — Export Excel / PDF

The exported report **now also includes** these verification columns:

New column	Shows
ID Verified	Yes / No
ID Type	Aadhaar / PAN / ...
ID No. (masked)	only the last 4 digits (e.g. xxxx-6815)
Verified On	date/time of verification

Why the ID is masked. We show only the last 4 digits on purpose — see Section 6.

6 • Why we don't store the full Aadhaar (and what we keep)

*Goal: keep your records **and** keep Pansen legally safe.*

We understand you want a record for safety and any police verification. But under India's **DPDP Act 2023** and the **Aadhaar Act**, a company **must not store the full Aadhaar number or a copy of the card** — holding them would put **Pansen** at legal risk.

Instead, the system keeps (fully compliant)	Why it's enough
Name + photo	Identifies the person
ID verified ✓ + date	Proves the identity was checked against UIDAI
Masked Aadhaar (last 4)	Links to the person without holding the full number

*For a police / audit query this answers “this verified person worked here on this date” — without you having to keep documents you're not allowed to hold. You get the record **and** the legal protection.*

7 • One mobile number = one person

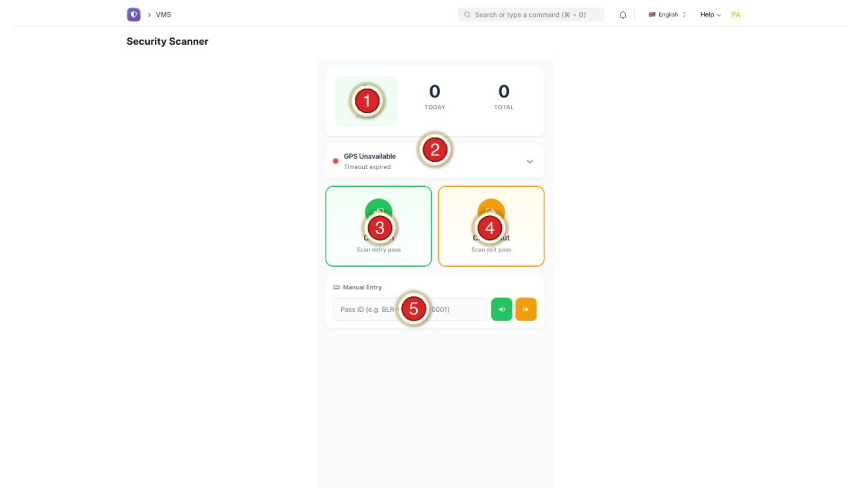

Goal: avoid two people sharing a pass.

Each mobile number can belong to **one person only** — the same number cannot register two different people. This keeps every pass tied to a single, verified individual.

*For workers who share a phone or have none, the **admin creates their passes** (Section 4). A contractor **batch sign-up** is planned for the next phase.*

8 • Check-in / check-out — now reliable

Goal: a trustworthy on-site count and smooth re-entry for multi-day workers.

Mark	Element
①	ON SITE live count (V = Visitors, W = Workers) — now accurate
②	GPS status (green = located)
③	Check In (green) — scan an arrival
④	Check Out (orange) — scan a departure
⑤	Manual Entry — type a Pass ID if the camera can't read it

The scanner itself was working fine. The real issue was that the **nightly auto check-out had not been switched on** — so anyone a guard forgot to scan out (④) stayed “Checked In” indefinitely. That (a) inflated the ① **On-Site count** and (b) blocked multi-day workers the next day (“already checked in”).

What we did	Result
Closed all stale “Checked In” passes	On-site count corrected immediately
Enabled the nightly auto check-out	Runs every night from now on — no more build-up

***How it works now:** if a guard forgets to scan someone out, the system **auto-checks-out at the end of that day**, so the on-site number stays accurate and the worker can re-enter the next morning.*

9 • Work-hours attendance report

Goal: see actual time in / time out and hours per worker per day.

Site Pass Attendance Report									
From Date	To Date	Type	Vendor / Contractor						
2026-06-18	2026-06-19	Worker	All						
275		3,467		12.6					
Attendance Records		Total Hours		Avg Hours / Day					
Date	Worker / Visitor	Type	Company / Contractor	Time In	Time Out	Duration	Exit	Status	
2026-06-18	Demo Worker A	Worker	ABC Contractors	08:02	17:34	9h 32m	Auto (est.)	Checked Out	
2026-06-18	Demo Worker B	Worker	ABC Contractors	06:36	23:59	17h 23m	Auto (est.)	Checked Out	
2026-06-18	Demo Visitor C	Visitor	XYZ Ltd	10:15	11:40	1h 25m	Scanned	Checked Out	
2026-06-17	Demo Worker D	Worker	DEF Builders	09:00	23:59	14h 59m	Auto (est.)	Checked Out	
2026-06-17	Demo Worker E	Worker	DEF Builders	08:30	16:45	8h 15m	Scanned	Checked Out	

Mark	Element
①	Date range — pick the period (also filter by Type / Contractor)
②	Export to Excel (or PDF)
③	Hours / Duration — time on site per worker, per day
④	Exit — <i>Scanned</i> (real check-out) vs <i>Auto (est.)</i> (auto-closed)

Column	Shows
Date · Worker / Visitor · Type · Company	Who, and which day
Time In · Time Out · Hours · Duration	When they were on site
Exit	Scanned = real check-out · Auto (est.) = day-end estimate
Status	Checked In / Checked Out

Read the Hours carefully. Where **Exit = “Auto (est.)”** the worker was **not scanned out**, so the hours are an **estimate bounded to end-of-day** (they read high). Hours are accurate only where **Exit = “Scanned”**. For true work-hours, **train guards to scan workers OUT** at the gate.

10 • Who issued / approved each pass

Goal: an accountable, exportable record of who issued every pass.

Site Pass Report						
From Date	To Date	Status				
2026-06-01	2026-06-19	All				
			Export to Excel			
Pass ID	Name	Type	Status	Issued / Approved By	Created On	
SP:a1b2c3	Demo Worker A	Worker	Checked Out	Auto-issued (self-registration)	2026-06-18 08:02	
SP:d4e5f6	Demo Visitor B	Visitor	Issued	Krishan Nath Yogi	2026-06-18 09:14	
SP:g7h8i9	Demo Worker C	Worker	Checked In	Auto-issued (self-registration)	2026-06-17 07:31	
SP:j1k2l3	Demo Worker D	Worker	Issued	Chain Singh Rathore	2026-06-17 10:48	
SP:m4n5o6	Demo Visitor E	Visitor	Checked Out	Auto-issued (self-registration)	2026-06-17 11:05	

Mark	Element
①	Issued / Approved By — who issued each pass
②	Export to Excel (or PDF)

The value shows	Meaning
A person's name (e.g. <i>Krishan Nath Yogi</i>)	An admin created / approved that pass in the back office
Auto-issued (self-registration)	The visitor self-registered and the pass issued automatically (after a verified Aadhaar) — no manual approval

Why “Auto-issued” is correct, not a gap. Self-service passes issue automatically once Aadhaar is verified — there is no manual step to slow the gate. The record is honest: it **names the admin**

when a person issued it, and says “**Auto-issued**” when the system did. Every existing pass was **back-filled**, so the history is complete.

11 • What's still coming (next phase)

So you know these are tracked.

Item	Plan
Gate-crowd fast flow	Supervisor issues passes for a line of workers without per-person OTP
Contractor batch sign-up	Register many workers at once

Please drop your full requirement list in the group — we'll reply to each with timing and a short SOP.
